EDUCATION

Cambridge Institute of Technology

Electronics and Communication Engineering BE

CGPA: 6.8

Bengaluru, India

2021 - 2025

EXPERIENCE

Varcon's Technologies | Web Developer Intern

Bengaluru, India | Oct 2022 - Jan 2023

- Completed an internship in Full-Stack Web Development at VarconsTechnologies.
- Developed a project titled "A Template to Check Train Ticket Availability."
- Gained hands-on experience in HTML, CSS, and JavaScript.
- Enhanced front-end and back-end development skills through practical implementation.
- Collaborated with a team to build a functional and user-friendly web application.

SKILLS

Programming Languages: Python, Javascript, C

Libraries/Frameworks: LangChain, Tensorflow, Agno(Phidata), Gradio, HuggingFace

Tools / Platforms: Jupyter Notebook, VS code, Windows, Google Collab, Weights & Biases

Databases: VectorDB, ChromaDB

PROJECTS / OPEN-SOURCE

RAG Agent - Multimodal Chatbot | [Link](#)

LangChain, LLM, Fast API

- Developed Retrieval-Augmented Generation (RAG) agents powered by large language models (LLMs).
- Integrated retrieval systems to enhance the precision and relevance of LLM-generated responses.
- Designed agents to handle complex, knowledge-intensive tasks using real-time access to structured and unstructured data.
- Combined reasoning and generative capabilities of LLMs with retrieval-based augmentation for improved accuracy.
- Implemented advanced AI techniques to optimize knowledge retrieval and response generation.

AI Assistant | [Link](#)

Assembly AI, Python

- Developed Smart AI Assistant, an intelligent and versatile AI assistant for task automation and productivity enhancement.
- Integrated natural language processing (NLP), machine learning (ML) to enable advanced functionalities.
- Designed personalized user experiences by tailoring AI capabilities to individual needs.
- Implemented cutting-edge AI technologies to streamline daily tasks and improve efficiency.
- Engineered a scalable and adaptive AI system for real-time assistance across various domains.

Integrated Rover with Robotic Arm (Academic Main Project)

Arduino

- Designed and developed a multi-functional robotic arm rover for precise object manipulation and autonomous navigation.
- Integrated advanced robotics and sensor technology for efficient object picking, placing, and path planning.
- Implemented real-time video streaming and remote control functionality for enhanced usability.
- Optimized rover performance for exploration, industrial automation, and rescue operations.
- Engineered a dynamic and adaptable system capable of operating in complex environments.

Wireless Bluetooth Controlled Robot (Academic mini Project)

Arduino

- Designed and implemented a Bluetooth-controlled robot using Arduino as the central control unit.
- Integrated motors and sensors for navigation and obstacle avoidance.

- Used a mobile app to send commands and receive real-time sensor data over Bluetooth.
- Engineered a user-friendly control system for enhanced maneuverability and functionality.

CERTIFICATIONS

- Python - HackerRank.
- LLM Engineering - Udemy.
- Natural language Processing - Infosys Springboard.
- Google Cloud Platform - Infosys Springboard.
