Profile Summary

- Information Technology professional with over **18+** Years of relevant IT experience working in various phases of software projects that includes Requirement gathering, Estimation, Design, Team Tracking Activities, Quality Related Activities, Code Reviews, Testing, Implementation and Production Support.
 - Over 18+ Years of experience in Core Banking.
 - Experience in Fidelity Core Banking Applications (TS, IM, ST and ALS).
 - Knowledge in C, UNIX, Java.
 - Excellent Interpersonal\Communication Skills.
 - Experienced in customer facing roles performing mainframe application Development Activities.
-

Software Skills

DBMS	DB2, IDMS, VSAM
Front End/GUI	CICS, ADSO
Language	COBOL, JCL, SQL
OS/Environnent	MVS Z/OS
Tools	DMLO, OLQ, IDD, MAPC, ADSC, DME, SPUFI, FileAid, Control-D, ENDEVOR, VIASOFT, NETMAN, QA-Hyper Station, Quality Center, SCM

Corporate Training

Undergone a Global Basic Program in Mainframes at CBSI from Sep'97 to Jan'98

Working Profile

Employer : FIS Global Business Solutions India Pvt. Ltd, Chennai
Title : Project Manager
Date of Employment : Dec 2011 to Till Date

Employer : HCL Technologies, Chennai
Title : Sr Technical Lead
Date of Employment : Dec 2007 to Dec 2011

Employer : HCL Technologies (M) SDN BHD, Malaysia
Title : Sr Software Consultant
Date of Employment : Nov 2000 to Nov 2007

Employer : TCS thru Sell Craft Soft Tech, Mumbai
Title : Systems Analyst
Date of Employment : Sep 1999 to Nov 2000

Employer : Complete Business Solutions India Ltd (CBSI), Chennai
Title : Application Developer
Date of Employment : Mar 1998 to July 1999

Credentials

Bachelor of Engineering in Mechanical (AMIMEchE), from Institution of Mechanical Engineers (INDIA), Mumbai.

Bachelor's Degree in Electronics, from Andhra University.

Professional Experience

1. TD Bank

Dec '11 – Till Date

TD Bank, America's Most Convenient Bank® is one of the 15 largest commercial banks in the U.S., with more than 22,000 employees and deep roots in the community dating back more than 150 years. The Bank offers a broad array of retail, small business and commercial banking products and services to more than 6.5 million Customers through its extensive network of about 1,300 convenient locations.

TD Bank operates in 13 states and the District of Columbia. In addition to banking products, the Bank and its subsidiaries provide clients with customized wealth management services through TD Wealth Management, and insurance products and services through TD Insurance, Inc., one of the largest insurance agencies in the Northeast.

TD Bank is a member of TD Bank Financial Group of Toronto, Canada, a top 10 financial services company in North America and one of a few banks in the world rated Aaa by Moody's. The Toronto-Dominion Bank trades on the New York and Toronto stock exchanges under the ticker symbol "TD". For more information visit www.td.com

As a Project Manager, I am responsible for:

- Requirement gathering and analysis with onsite subject matter experts
- Team Tracking, Project Management and Quality Activities
- Estimation, analysis and Design
- Perform defect analysis, solution and preventive mechanisms
- Coding, Unit testing, conducting code walkthroughs/Reviews with the peers
- Integration Testing, system Test support

2. USAA Bank Fidelity Core Banking

Jan '10 – Aug '11

United Services Automobile Association (USAA) is a Fortune 500 financial services company offering banking, investing, and insurance to people and families

that serve, or served, in the United States military. In 2010, there were 8.0 million members. The company reported a net worth of \$18.7 billion in 2010.

HELP-U-SAVE: This project is to process the member promotion offers specific to the IM and ST accounts for primary Banking Growth initiative. There are different Promotions like Rewards, Bonus, Rate incentive and Waive fee promotion Incentive for the members who are having IM accounts and ST accounts.

REG-E: To take FIS Signature transactions from the TS next log files between 7 and 9 P.M. and create maintenance transaction affect the hold amount only for the batch cycle. Also generate transaction so it will not accrue interest on those accounts for the batch cycle.

Preemption-ALS: Provide FSB with the capability to meet the new state level home equity and consumer lending messaging and fees requirements as they become known to the business.

As a Sr. Tech Lead, I am responsible for:

- Requirement gathering and analysis with onsite subject matter experts And providing preliminary design solutions
- Team Tracking, Project Management and Quality Activities
- Estimation, analysis and Design
- Perform defect analysis, solution and preventive mechanisms
- Coding, Unit testing, conducting code walkthroughs/Reviews with the peers
- Integration Testing, system Test support

3. Belgacom IDMS Business Continuity

Jan '09 – Jan '10

Belgacom NV/SA of Public Law, headquartered in Brussels, the heart of Europe, is the leading telecommunications company in Belgium and a market leader in a number of areas, including retail and wholesale fixed-line telephony services, mobile communications services and broadband data and Internet services.

As part of this project, the application that currently runs on BS2000/IDMS platform will be migrated to IDMS on IBM Mainframes Z9 Series to support business continuity until 2017. The proposed architecture is designed with a view of keeping the changes to existing infrastructure and application portfolio at a minimum. This ensures Business Continuity.

As a Tech Lead, I am responsible for:

- Analysis of the existing system.
 - Providing preliminary design solutions
 - Design and Architecture of new development and enhancement assignments
 - Perform defect analysis, solution and preventive mechanisms
 - Estimation, analysis and Design
 - Coding, Unit testing, conducting code walkthroughs/Reviews with the peers
 - Integration Testing, system Test support
 - Implementation, post Implementation Support.
-

4. AEGON SC-Pension – AEGON, Netherlands

Jan '08 – Oct '08

AEGON, AEGON NV is one of the world's leading listed insurance company ranked by market capitalization and assets. AEGON's businesses focus on Life insurance, Pensions, Savings and Investment products. The group is also active in Accident & Supplemental health insurance and General insurance, and has limited Banking activities.

This project is a T&M assignment. AEGON role out 3 releases with a year, the scope explained will be logged into "TOP DESK" by AEGON. AEGON SC-Pension business team and AEGON SC-Pension IT team decides the work bundle to be handled in a release based on priority and need. HCL as AEGON's offshore strategic partner will execute "Functional Design", "Technical Design", "Build", "Unit Testing" and "System Testing" from offshore.

Project size and effort may vary from release to release. Depending on the size of the release, HCL may increase / decrease the team size.

As a Tech Lead, I am responsible for:

- Quality review of programs.
- Project tracking and monitoring.
- Project Administrative/Quality Management Activities.
- Effort Estimation.
- Interaction with On-site team.

ALS: Automated Loans System
CLS: Corporate Loans System
SC : Combined Statement

As a Consultant, I am responsible for:

- Requirement gathering and analysis with onsite subject matter experts
And providing preliminary design solutions
- Team Tracking, Project Management and Quality Activities
- Estimation, analysis and Design
- Perform defect analysis, solution and preventive mechanisms
- Coding, Unit testing, conducting code walkthroughs/Reviews with the peers
- Integration Testing, system Test support

6. MALAYAN BANKING BERHAD – MAYBANK, Malaysia

Nov '00 – Dec '05

MALAYAN BANKING BERHAD, also known as Maybank (www.maybank2u.com.my) is one of the leading Banks in Malaysia with its largest branch network all over the country & accommodating the largest customer database with the help of IBM S/390. The bank provides almost all the facilities available in the country for their customers through their network, which are online i.e., ATM, Desktop Banking, Internet Banking, Phone Banking, Call Center etc.

MAYBANK, who have designed their own Application Software to suit their Banking operation requirement and have almost all the banking products available i.e., Pay Roll System, Customer Information Facility, Retail Banking Application, HO & Remittance Applications System, Fixed Deposits, Loan, Finance & Hire Purchase System, Cash Management System etc.

Over all Role and Responsibilities:

➤ **Maintenance & Enhancement of many Products and given support to the following.**

- Online teller transactions (deposits/withdrawals/inquires/updates)
 - Overdrawn Accounts, NPLs
 - Interest/Penalty computation
 - Commitment fees computation
 - Monthly/Half yearly service charge computation
 - Fund transfers
 - OD facilities
 - STOP Payments, Float age process, HOLD/TEXT, Statements
 - Institutional Unit Trust Agency
 - SPICK Process
 - FD
 - Cash Management System
 - SOA(Simplifying opening account)
 - Support to External Audit
 - Support on Call request. Job Profile includes Monitoring, Scheduling Jobs & Rectifying Job Failures.
 - Update Relevant Documents & Report Progress on Maintenance.
 - Unit testing of programs.
-

- User Acceptance Testing (UAT) support.

Developed Major Projects in Maybank like:

Project #1: Implementation of Pooling & Sweeping function in the Liquidity Management module of the Cash Management System

Project Overview:

CMS initiated straight through creation of Fund Transfer.

Sweeping: Sweeping refers to the process of actual movement of funds between linked accounts; this is available in MARS as Pegged Fund Transfer.

Pooling: Notional Pooling refers to the process of aggregating the account balances without actual movement of funds of linked accounts for the purpose of interest computation.

CMS will send a file to MARS host to specify the accounts to be linked for the daily sweeping of funds, to be modified or deleted with information as per file format. MARS host will update the information to a new area to enable new daily processing.

Daily process will involve extraction of ledger balances of linked accounts, aggregation of the ledger balances of the linked accounts to obtain a net-off ledger balance figure, and computation and storing of interest.

Project #2: Implementation of Fixed Deposits tier2 interest rates

Project Overview:

On 1206/06, the Management approved a single tier i.e. Tier 1 or Board rate to be quoted to all Fixed Deposits (FD) Placed by individual Resident and Non-Resident customers irrespective of the FD placement amount.

With the above implementation, all Retail FD customers have been enjoying Tier1 interest rate instead of the two tiered rate for FD placements above RM1 million or Tier2 for Non-Resident FD placements.

Retail Marketing, Product management has requested to re-activate the Tier2 FD interest rate for Retail customers. As such, system development will be required to check and aggregate the customer's total FD deposits before assigning either the Tier1 or Tier2 FD interest rate.

Project #3: Automation of Multiple profit rate & Profit rate against cost of fund

Project Overview:

Under Islamic Banking facilities there are two types of profit rates namely 1.Pricing is based on long term basis, 2.Pricing is based on short term basis are automated.

The Introduction of Multiple Profit Rate & Profit rate against Cost of funds are another types of rate for Islamic Banking currently Branches and Centers are manually handling these types of Profit rates.

This Automation to improve profit computation on these types of rate as well as system tracking of these accounts and to enable maybank products to be as competitive as conventional and will help to improve sales, change the profit rate in tandem with changes in market to enable the bank to protect its loan exposure against market changes.

Project #4: Automation of Bad Cheque Tracking (BMC)

Project Overview:

Bank Negara Malaysia (BNM) has set up a Central Bureau (known as Biro Maklumat Cek, BMC) to monitor "BAD" cheque incidents. a "BAD" cheque incident occurs when the paying bank returns a cheque unpaid due to insufficient funds in the account.

A "BAD" cheque offence occurs when an account holder has committed 3 "bad" cheque incidents within 12 months from the date of the first incident and it works on a rollover time frame. The paying Bank will report the Bad cheque offender to BMC and shall take the necessary steps to close the account or if the offender is eligible, to redesign ate the account as a "Special Account". BMC shall then circulate the "blacklisted" name of the offender to other banks to effect "global" closure of his account.

To Develop a system to automate the tracking and reporting of "Bad" cheque incidents to BMC this involves a) Auto tracking of all bad cheques, b) Auto generation of Warning Letters for accounts with No previous bad cheques, c)Online inquiry of Bad cheque information, d)Online inquiry of Maybank accounts reported to BMC, e)Clean-up of Online bad cheque information, f)Auto closure of accounts with Credit balance and without facilities and holds.

Project #5: Simplify of Opening Account (SOA)

Project Overview:

To improve the process flow of opening accounts, to do away with forms filing i.e. the application forms, ATM forms and bio-data form for Retail customers. To generate customer's information from the system to replace hard copy account opening form and no toggling between CT-Lan and dialogs, Auto generation of account numbers and FD certificates.

Project #6: LIS & Current Account OD Interface

Project Overview:

The data between the LIS system and account will be synchronized and the duplication of tasks will be eliminated.

The fields like Facility type, A/A number, Product type, A/A date, Market segment and Economic sector are updated from LIS system into account area. Credit officer to input Authorized Limit and modify the interest rates, Changes are done in LIS and interfaced to Account.

Project #7: ODPC – OD against Contract Payments

Project Overview:

It is an Overdraft facility granted by the bank to their customers where by the Progressive certificates submitted for contract jobs performed, their Amounts are credited to the customer's current accounts and made available for their utilization.

Project #8: ODOC – OD against out port Cheques

Project Overview:

It is an Overdraft facility granted by the bank to their customers where by cheques deposited into their current accounts can be utilized pending clearance.

Enhancements like drawing limit will be updated online upon deposit of a cheque. Any reversals or return cheque will reduce the drawing limit. And recalculate the drawing limit against based on the float outstanding for the accounts.

Project #9: Institutional Unit Trust Agency (IUTA)

Project Overview:

The IUTA system is a CT-LAN based system which enables the customer to purchase the Units via MBB branches and subsequently the teller and custodian customer service will use the new 3270 dialog screen to perform reconciliation and routine maintenance.

There will be new dialogs and existing reports help both the branches and custodian users to manually perform the EOD activity.

Project #10: Current Accounts Merger Conversion & Branch Rationalization

Project Overview:

Pacific Bank (PBB) and Philieo Allied Bank (PAB) are the two banks merged with Maybank.

Involved in loading the PAB, PBB data - Account file (contains all the critical fields like balances, product type, facility type, Interest info, penalty info etc), TEXT, HOLD, FLOAT, COLLATERAL, INSURANCE, NPL to Maybank IDMS database. And generating the QC reports on exception fields, report on A/c without AA no. In LIS, QC on discrepancy summary, QC on float after conversion, QC report on conversion of cheque book, QC report on conversion of STOP Payment etc.

7. GE Capital Auto Financial Services - Barrington, USA

Mar '00 - Sep '00

GE Capital AFS is the oldest automotive financial resource in the United States Based in Barrington, Illinois. Core Leasing is one of the major Systems in AFS.

Lease is a system, which is part of the GE Capital business where it deals with the leasing of the vehicles to the customer's. It has Accounting Service, Call Center, Purchase and Finance. This project involves Maintenance of GE Capital AFS Application leasing including major and minor enhancements. GE Capital AFS is in the business of financing all kinds of automobiles. It has a large dealership network through which it establishes a relationship with the customer. Purchasing, Leasing, Billing, Posting are some of the major systems in GE Capital AFS.

Purchase System is an important module in GEC-AFS legacy systems. It is one of the modules that give the input to the lease system. Approved Lease Applications from Apps System bought into Purchasing System. These deals are funded in this system and drafts are sent to dealer. This system has 80 batch jobs and more than 300 COBOL programs. Most of its online part is in ADS/O and DC COBOL. This application is having 25 screens.

Roles and Responsibilities:

- Maintenance & Enhancement of many of the existing Programs of Apps, Lease & Purchasing System in order to meet the changing Business requirements.
- Incorporate the changes required to fix the problem in Code, Data, and JCL and carry out the testing.
- Support on Call request. Job Profile includes Monitoring, Scheduling Jobs & Rectifying Job Failures.
- Update Relevant Documents & Report Progress on Maintenance.
- User Acceptance Testing (UAT) support.

8. ACS (American Consolidation Services), Oakland, California, U.S.A

Aug '98 – Jun '99

The Production Compliance System is for The American Consolidation Services (ACS) Co. that is involved in cargo consolidation and transport business having operations worldwide base at Oakland, California.

The Production Compliance System developed helps in tracking the production compliance of the vendor with respect to orders placed by the customer. The system starts with collecting the required information, the Purchase orders from the customer. Now Status requests are sent to the Vendor and after the feedback the database is updated and Reports sent to the customer on the basis of the feedback. The highlight of this system is that it allows a great deal of flexibility to the user to define the business rules and also allows for flexibility in generating reports.

As an Application Developer, I am responsible for:

- Development of the Production Compliance System.
- Preparation of Unit test plan.
- Test Data Preparation.
- Unit Testing.
- Quality review.
- Integration testing, where applicable.
- Involved in Design of Pseudo Code and Coding of programs.
- Involved in Design of on-line screens using MGEN tool.
- Developing the Unit Test Plan and Test Data creation.
- Unit testing of programs.
- Quality review of programs.
- User Acceptance Testing (UAT) support.

9. UDLP-GSD (United Defense Limited Partnership), York, Pennsylvania, U.S.A

Mar '98 – Jul '98

UDLP-GSD is a government contractor, specializing in the manufacturing of tracked vehicles. UDLP-GSD mainframe applications are organized into two Major Business Groups; Manufacturing Related Systems & Financial Control System. The mainframe applications run on an IBM MVS system using an IDMS database.

This project involves making the system y2k compliant and upgrading the system from OS/VS COBOL to COBOL for OS/390, IDMS R10.2 to IDMS R14.0 and MVS/XA to OS/390 Operating System.

Role and Responsibilities:

- Involved in conversion of COBOL programs for Y2K complaint.
- Involved in testing of converted programs.
- Quality review of programs.
- Conversion of COBOL programs to support S390 from MVS/XA.
