

Khyatinikhila Kunaparaju

Embedded Software
Test Engineer

Experience:

7+ years

Phone:

+91 998-550-2944

Email:

khyati.kunaparaju@gmail.com

Programming Exp:

C, Python scripting and
(familiar with Linux system
programming concepts)

Debugging Tools:

LISA, Crash dump, Infra
Perf, Systrace, Surface
Flinger, Battery-Historian

Automation Test Tools:

AXIOM and PTAS

Other Tools:

QPST, PCAT, QFIL, JTAG,
Power monitor, JIRA,
Orbit, Trace 32, BUSPM,
Bug tracking tool

Operating Systems:

Android, Linux and
Windows

Education:

MTech in Embedded
Systems (2013-2015)
-- BVRIT Hyderabad,
Telangana

Summary

- **7+ years** of experience in **Embedded Software testing**, primarily on **Qualcomm Snapdragon Chipsets**.
- Experience in **Post-Silicon Power testing**, **Multimedia testing**, and Characterization activities on Snapdragon boards.
- Experience in developing test strategies, writing test scripts, working on automation tests, test result analysis, and reports preparation and presentation.
- Have knowledge of SOC architecture, Power grid, CPU states, Android and Multimedia subsystems, and native crashes.

Experience

Senior Engineer - **Votary Softech Solutions** Pvt Ltd, Hyderabad (July, 2015 – Present)

- Test Engineer – Power team, **Qualcomm**, Hyderabad (Dec, 2019 – Jan, 2023)
- Test Engineer – APT team, **Qualcomm**, Hyderabad (July, 2016 – Oct, 2018)

Key Assignments

Test engineer (Dec,2019 to Jan,2023) - Power team, **Qualcomm**, Hyderabad:

- **Power and Performance testing of Multimedia** on Snapdragon Chipsets.
- Setting up test beds and update of automation test scripts for every new chipset.
- Responsible for Power test plan execution, analysis and test report presentation for various engineering builds.
- Responsible for identifying component level power leakages, collecting logs and working with developers to reproduce and resolve issues.
- **Tools and Technologies Used:** Python scripting, Kratos, PCAT, Linux Integrated System Analysis (LISA), Power grid, Waveform-Superimpose.

Test Engineer (July, 2016 to Oct,2018) - APT team, **Qualcomm**, Hyderabad:

- **Touch and Display testing** of various Android builds over different Snapdragon Chipsets.
- Functional and Performance testing of ADSP and MDP subsystems.
- Responsible for test case preparation and execution of test plan.
- Responsible for analysing trace logs, crash dumps, and work with development team to replicate and debug customer issues and prepare RCA reports.
- **Tools and Technologies Used:** Python scripting, ADB, QPST, QXDM, JIRA, Crash Scope, Prism, Optofidelity Robot, Axiom, Orbit, QDCM.

Engineer (Dec, 2015 to June, 2016) - **Votary Softech Solutions**, Hyderabad:

- **ADC driver implementation** for sensor components using I2C and **Remote Debugging** using SSH protocol for OMAP board.
- Added PCF8591 Driver code in Kernel Source code, and set-up secure HTTP communication using SSH keys with Embedded Linux based Server.
- Analysed the connectivity between SOC and ADC chip in the schematic.
- Developed A/D testing application and tested on target board.
- **Tools and Technologies Used:** C, Make filé, GCC, CTags, SSH, GIT.
