

RESUME

INFANT PRAKASH V

Embedded Engineer

PROFILE

Name

INFANT PRAKASH V

Date of Birth

July 17, 1997

Address

47,Rainbow Nagar,3rd
street,U.K.T Malai,Trichy-102.

Phone

+91-7904015312

Email

infantprakasheee@gmail.com

SOCIAL MEDIA

Linked-In

linkedin.com/in/infant-prakash

JOB EXPERIENCES

2022-Present

Inglo,Coimbatore

Embedded Software Engineer

2019-2022

Power Integrated Solutions,Trichy

Embedded Design Engineer

EDUCATION

2015-2019

K RAMAKRISHNAN COLLEGE OF ENGINEERING

B.E -Electrical and Electronics Engineering

2013-2015

SRI MAHABHARATHI HSS - Namakkal

12th & 10th Standard

SKILLS

PROGRAMMING SKILLS

- C
- Embedded C
- Python

PROTOCOLS USED

- UART
- I2C
- SPI

MICROCONTROLLERS : STM32,ESP32,ARDUINO,RENESAS

MODULES : GSM,GPS,RTC,LCD,SENSORS

IOT PROTOCOLS : HTTP,MQTT,IP

ADDITIONAL SKILLS

VCS & RTOS : GIT ,Free RTOS

METERS : Multimeter,Digital Power Meter,DC Electronic Load,DSO

Debugging Tools : ST-Link V2

AREA OF INTEREST

Version Control Systems
Industrial Automation
E-Vehicles
Artificial Intelligence

PERSONAL INTEREST

Cricket
Carrom
Chess
Planting Trees

SOFT SKILLS

- Presentation
- Team Work
- Public Speaking
- Problem Solving
- Creativity

PERSONAL INFORMATION

Father Name : A . Vincent

Mother Name : M L Marthal

Blood Group : O+ve

Marital Status : Married

LANGUAGES KNOWN

- Tamil
- English

PROJECTS

INGLO

- EMBEDDED SOFTWARE ENGINEER

INVERTER DATA TRANSFER

MICROCONTROLLER: ESP32WROVER MODULE

PLATFORMS: ARDUINO IDE

- Data of the Solar-Off Grid Inverter is fetched by UART and process those information as per Customer Requirements.
- Here, the data is received by encrypted format like start and end bits.
- Here,ESP itself acts as a Hotspot.This is like a offline mode.
- Process those information and sent the data to IP address using ESP-AP mode.

SOLAR STREET LIGHTNING SYSTEM

MICROCONTROLLER: STM32F030K6T6

PLATFORMS :STM32CUBE MX,KEIL MVISIONIDE.

- Solar Street lights worked by 2 methods.First,concept is to be timer based dimming.
- Second Concept is to be PIR Sensor based light controlling.Here,the light on/off is controlled by PIR Based ON/OFF.

GPS TRACKING SYSTEMS

MICROCONTROLLER: ARDUINO MEGA 2560

PLATFORMS :ARDUINO IDE

- Using SIM-808 Module Interface with Mega fetch the GPS Location using Google maps URL and send the link to customer mobile by sent any text message from sender mobile number.

OTHER PROJECTS

WATER LEVEL CONTROLLER

MICROCONTROLLER: ESP32,ULTRASONIC SENSOR,THINKSPEAK

THEME : SAVE WATER

OTHER PROJECTS

SMART ENERGY METER

MICROCONTROLLER: ESP32,CURRENT SENSOR

THEME : SAVE ELECTRICITY

POWER INTEGRATED SOLUTIONS

-

EMBEDDED DESIGN ENGINEER

GAS LEVEL ALARM MONITORING SYSTEM

MICROCONTROLLER: ESP32WROVER MODULE

PLATFORMS: ARDUINO IDE, THINKSPEAK(IOT)

- Propane and Butane level of the gas is sensed through MQ-2 Sensor and monitor those hazardous value in IOT Cloud using thinkspeak.That, shown us the exact level of gas based on that we take the precautions as quickly.
- Similarly,same project using buzzer indication also done.This is done for a factory safety measures.

SMART HOME LIGHTNING SYSTEMS

MICROCONTROLLER: ESP32WROVER MODULE

PLATFORMS: ARDUINO IDE, ADAFRUIT/MIT APP INVENTOR

- Smart switching for home is done here by controlling the relays using the DO Pins. Here,Integrate the DO pins with relay using the ON/OFF Button.(Adafruit)
- Here,the pins of the module is connected with the app by create instance and integrate those activities leads to control the home lightning systems.

GSM BASED PUMP CONTROL

MICROCONTROLLER: ARDUINO MEGA 2580,SIM 800

PLATFORMS: ARDUINO IDE, GOOGLE MAPS

- Using,the text messages like "PUMP ON" the motor is on and pump operates.Similarly,using the messages"PUMP OFF" the motor is off and pump goes to off mode.
- Similarly,this can be done using by giving the phone ring also.

DECLARATION

I assure you that the above information provided are true and correct up to my Knowledge.
