EDUCATION

- **M.Tech (Electronics & Commun.) 2017 -2019, secured 7.8 CGPA**

College of Technology and Engineering, MPUAT, Udaipur

- **B.Tech (Electronics and Commun.) 2013 - 2017, secured 76%**

Geetanjali Inst. of Tech. Studies, Udaipur

- **High school, 2013 passed, secured 72%.**

kendriya vidyalaya school, Mandsaur

- **Secondary High School, 2011 passed, secured 8.8 CGPA.**

kendriya vidyalaya school, Mandsaur

WORK EXPERIENCE

PROJECT ENGINEER

Robotronix Engineering Tech. PVT. LTD.

March 2021 - Present

As a project lead engineer, I developed projects based on customer needs, performed research-based product development, and developed embedded systems and PCBs. RTOS-based application development in C. I've worked on 8051, Arduino boards, esp8266, esp32, esp32-Lorawan, Raspberry Pi, etc. Work on I2C, SPI, UART, HTTP, cloud services like ThingSpeak cloud, IFTTT, etc. GSM, GPS, Bluetooth, etc. Dip trace PCB design, Proteus simulation. PCB debugging and testing.

Also, I coordinate and manage my team's activities from conception to completion. Maintaining the lab involves inspecting and fixing equipment and essentials. Client handling includes technical negotiating, Costing and Consumption-based material planning, and vendor purchase orders. Gives seminars, webinars and workshops at engineering colleges.

- **Automatic Ultraviolet Radiation (UV) Disinfection Shelf**

Automated Ultra-Violet (UV) Disinfectant Shelf sanitizes items. Arduino Mega acts as the principal microcontroller, and a stepper motor pushes the UVC-containing box in front of the object for a few seconds to sanitize and destroy germs for 10 sec.

- **Drowsiness Detection System**

Our system can identify driver drowsiness. Our technique delivers a cap-mounted gadget that tilts a driver's or person's head when they lose focus. Our method evaluates the angle to a specified angle, detects vibrations, and warns and alarms the driver.

- **Smart Soil Healthcare Monitoring Device**

This approach simplifies and automates plant monitoring systems, which determine moisture, temperature and humidity, and plant health. This AIOT-based project collects data using Python and uploads it to the cloud or a GUI.

- **Identification of soybean crop health using AIOT**

We collected field data using a Raspberry Pi-based IoT device. This hardware contains a high-quality camera for real-time crop and field images and data analysis. We sorted the data using image processing and features. Model accuracy is trained.

- **Women security systems using AIOT**

When women are in trouble, the system will choose based on a high pulse rate irregularity. After a minute, it automatically notifies registered persons and police contact numbers. When switched on, the device enables GPS to track the woman's whereabouts and sends an emergency email to someone who can help her. The data is also shown on the dashboard.

- **Automatic hand sanitizer**

We built an automated hand sanitizer using embedded technology to provide quick and easy hand disinfection and avoid cross-contamination, delivering excellent hand hygiene.

- **Lab Automation (fully IOT based)**

Here, we presented an IoT device to control lab appliances, using conventional technologies to automate our lab through the internet. This webpage shows lab lights and a fan using six loads. We have a webpage to control lighting and a remote app. This saves power and labor.

TECHNICAL SKILLS

- Embedded C
- RTOS environment
- Arduino board, ESP8266, ESP32
- HTTP, I2C, UART, SPI
- IoT platform, Energia software
- HTML, CSS, basics of PHP
- Thingspeak cloud computing and analysis
- Basic python programming
- Tkinter GUI framework
- PCB designing and fabrication
- Technical and instrumentation knowledge

ACHIVEMENTS/ CERTIFICATION

- Attend IoT workshop at MNIT Jaipur.
- Attend embedded and wireless robotics workshop.
- Won Inter College National level competition in badminton.
- Won Green Olympiad in 10th class.
- Scout's & Guide's in school.

HOBBIES

- Art and craft, sports, travelling, cooking etc.

SCIENCE TEACHER

SANDIPANI ACADEMY

August (2020)- February (2021)
8 months

As a science teacher, I was responsible for creating lesson plans in the appropriate subject area and grade level, as well as ensuring that all classes met the curriculum's objectives. I Provide more resources, support, and solutions for struggling students.

Industrial Training

6 weeks of industrial training in PLC and SCADA and panel designing from Geetanjali Institute of Technical Studies.

Research Papers/ Seminars

- Drowsiness detection cap using embedded system. **IJERT**. Publish the research paper on the given topic in the International Journal of Engineering Research and Technology. **(March 2022)**.
- Industrial Application of Internet of Things (IoT). **BIET**, a keynote speaker in a webinar on the above topic at Bharat Institute of Engineering & Technology, in Hyderabad, **(July 2021)**.
- Design & Development of Cloud IoT-based soil Health Monitoring System. **IJSRD**, Publish the research paper on the above topic in International Journal for Scientific Research and Development. **(Oct 2019)**.
- Start-up project approved by NSTEB under **NewGen IEDC** program. guide by Dr. Sunil Joshi, **(Feb- Oct 2019)**.
- A cloud-based Soil Health Digitalization & Monitoring Technique for Optimum Resources Utilization in Smart Farming, **IEEE**, Manipal University, Jaipur, Rajasthan, **(Sept 2019)**.
- Optical Fiber Sensing Technology in the IOT, **GITS**, Udaipur, **(June 2018)**.

DATE: 11-July-2022

Place - Indore
